## “Everyday Air Pollution”

---

Many of our everyday energy needs are supplied by machinery and devices that pollute our air. Color the following pages, and share them with family and friends to help remind everyone about how to avoid polluting the air we breathe.

**Driving around in automobiles and trucks is one of the largest sources of air pollution.  
We need to encourage grown-ups to walk, ride bikes and buy more fuel-efficient cars.**

**We don't think about it, but much of the electricity we use in our homes comes from power plants that burn coal to make electricity. We should find ways to use less electricity--like hanging the laundry out to dry instead of using the dryer!**

**Gas-powered lawnmowers are one of the largest sources of air pollution. We should encourage grown-ups to find alternatives to gas-powered lawnmowers--like powerless push mowers, which are also a great way to get exercise!**
